SKILLS

Java, Kotlin, Python, JavaScript, Android SDK, Coroutines, Jetpack Compose, MVVM, MVI, Data Binding, Room, Retrofit, Firebase, On-Device AI, Spring Boot, Node.js, REST APIs, JSON, React, JSX, PostgreSQL, MongoDB, Git, Gradle, Maven, Docker, Jira, Android Studio, IntelliJ IDEA, Eclipse, TensorFlow

Languages: Hebrew (Native), English (Fluent), Arabic (Conversational)

ABOUT ME

I am two months away from completing my B.Sc. in Software Engineering. During my military service, I developed and maintained mission-critical mainframe programs and contributed to the IDF's SAP system-migration effort.

Currently I build Android and backend projects using Kotlin, Java, Firebase, Spring Boot, and Docker.

My background in critical systems has taught me to pay close attention to detail, implement changes carefully, and build software that users can rely on.

EDUCATION

2022 - 26 **B.Sc. in Software Engineering**, Afeka Tel Aviv Academic College of Engineering

- Majoring in User Interfaces & Related Software Development
- Coursework: Integrative Software Engineering (100), User Interfaces - Security and Privacy (100), Mobile Applications (99), Object-Oriented Programming (93), Databases (93), Software Engineering Methods (90)

Certifications & Training:

[Java Network Programming](#) | [Android 16 Part 1](#) | [Android 16 Part 2](#) | [Master On-Device ML & AI for Mobile Apps](#)

PROJECTS

ANDROID SECURITY RESEARCH APP | Security Project | Kotlin, Android Coroutines, Node.js, Ngrok | 2026

- I developed an Android security research app with a Node.js backend to demonstrate how malicious mobile apps can expose sensitive user data, implementing encrypted data handling, covert client-server communication and dynamic BLE scanning mechanism according to the phone's battery level to keep the app alive while utilizing Android Coroutines and Accessibility Services.
- The project resulted in a working educational prototype that received a grade of 100 that promotes user awareness, secure mobile architecture, and responsible security testing.

AIRWISE | Team Project | Java, Spring Boot, Backend, DevOps | 2026

- I contributed to a team-based Spring Boot platform for centralized air-conditioning monitoring and control, serving as a System Architect and DevOps team member while designing backend logic and participating in system testing.
- The project received a grade of 100 and was selected by the course lecturer as one of the distinguished projects in the course.

GIT-GIT | Android Learning Game | Kotlin, Android, On-Device AI | 2026

- I developed an Android learning game featuring a simulated Git engine, interactive branch visualizer, world-based progression, and an on-device Gemma-powered AI assistant to teach practical Git workflows.
- The application was published on Google Play, providing its users with a safe and interactive environment to practice Git concepts such as commits, branches, merges, and mistake recovery.

WORK EXPERIENCE

2021 - 22 **Mainframe Operator**, Mizrahi Tefahot Bank - The Technological Division

- I Monitored and resolved incidents across the bank's central mainframe production and test environments, supporting stable and continuous operations for bank customers and internal departments.
- I earned a strong recommendation from my former manager for reliable performance and effective incident handling in a critical banking environment.

MILITARY SERVICE

2018 - 21 **Mainframe Developer**, SHAHAR Unit, C4I, J6 & Cyber Defense Directorate, Staff Sergeant

- I developed and maintained mission-critical legacy code of the IDF's central workforce management system, supporting accurate, reliable, and continuous personnel operations across the organization, improving workflows between connected systems users, and stakeholders across multiple units.
- I also helped to maintain workforce-system availability during alerts and operational incidents, enabling timely support for military operations and personnel while resolving issues within minutes up to two hours, depending on severity.

VOLUNTEERING

- I am contributing to a team developing a Flutter-based mobile app focused on well-being and productivity.
