SKILLS

Java, Kotlin, Python, JavaScript, Android SDK, Coroutines, Jetpack Compose, LiveData, MVVM, MVI, Clean Architecture, Room, Retrofit, Firebase, On-Device AI, Spring Boot, Spring Security, Node.js, REST APIs, SQL, PostgreSQL, MongoDB, JUnit, React, Git, Gradle, Maven, Docker

Languages: Hebrew (Native), English (Fluent), Arabic (Conversational)

ABOUT ME

I am completing my B.Sc. in Software Engineering. During my military service, I developed and maintained mission-critical mainframe programs for the IDF's central workforce management system and contributed to its SAP migration. I worked with users of integrated systems, QA and systems teams, and SAP stakeholders to translate requirements into reliable software that supported accurate personnel operations and system availability. I apply this experience to Android and Backend development using **Kotlin, Java, Firebase, Spring Boot, and Docker**.

EDUCATION

2022 - 26

B.Sc. in Software Engineering, Afeka Tel Aviv Academic College of Engineering

- Majoring in User Interfaces & Related Software Development

- Coursework: Integrative Software Engineering (100), **User Interfaces - Security and Privacy (100)**, **Mobile Applications (99)**, Object-Oriented Programming (93), **Databases (93)**, Software Engineering Methods (90)

Certifications & Training:

[Java Network Programming](#) | [Android 16 Part 1](#) | [Android 16 Part 2](#) | [Master On-Device ML & AI for Mobile Apps](#)

PROJECTS

ANDROID SECURITY RESEARCH APP | Security Project | Kotlin, Android Coroutines, Node.js, Ngrok | 2026

- I developed Android malware with a Node.js backend to demonstrate how malicious mobile apps can expose sensitive user data, implementing encrypted data handling, covert client-server communication and dynamic BLE scanning mechanism according to the phone's battery level to keep the app alive while utilizing Android Coroutines and exploiting Accessibility Services.
- The working prototype received a grade of 100 and demonstrated my ability to turn a complex mobile-security risk into a practical proof of concept that supports user awareness, data protection, and secure mobile design.

AIRWISE | Team Project | Java, Spring Boot, Backend, DevOps | 2026

- I contributed to a team-based Spring Boot platform that centralized the monitoring and control of connected air-conditioning units, giving users clearer visibility and simpler management of the system.
- I served as the system architect and DevOps team member while also contributing to backend development and system testing, helping the team deliver a reliable platform that earned a grade of 100 and was selected as one of the course's distinguished projects.

GIT-GIT | Android Learning Game | Kotlin, Android, On-Device AI | 2026

- I developed an Android learning game that turns complex Git workflows into guided, terminal-style challenges, giving users a safe environment to build practical skills before working on real repositories.
- I integrated Git simulation, an interactive branch visualizer, and an on-device Gemma AI assistant into a working application designed to shorten the learning curve and reduce mistakes during Git practice. The app is currently undergoing testing and preparation for release on the Google Play Store.

WORK EXPERIENCE

2021 - 22

Mainframe Operator, Mizrahi Tefahot Bank - The Technological Division

- I monitored and resolved incidents across the bank's central mainframe production and test environments, helping maintain business continuity and minimize disruptions to customer-facing services and internal operations.

MILITARY SERVICE

2018 - 21

Mainframe Developer, SHAHAR Unit, C4I Corps, J6 & Cyber Defense Directorate, Staff Sergeant

- I developed and maintained mission-critical mainframe programs for the IDF's central workforce management system, translating operational requirements into business rules and system changes that supported accurate civilian benefit-related processes and reliable internal military personnel workflows across integrated systems.
- I collaborated with operational users, QA, and technical teams to investigate incidents and maintain system availability during alerts, resolving issues within minutes to two hours depending on severity and helping preserve continuity across personnel operations and civilian-facing services.

VOLUNTEERING AND INTERESTS

- I volunteer as part of a team of Flutter developers building a mobile app that helps people improve their physical, mental, and emotional well-being.
- My interests include automotive diagnostics and repairs, electronics troubleshooting, and hands-on DIY projects.
